Digital Transformation of Tax Administration

Introduction

Introduction

Many tax administrations are digitizing their interaction with enterprises, reshaping digital filing and reporting requirements and digitizing their audit techniques. However, the challenges of disruption in the tax world are becoming more and more evident.

Fast-paced and inconsistently designed changes to the tax policies and the administration processes are issues that are affecting taxpayers especially hard as they struggle to keep up with it. The importance of the problems is largely due to the improper use of innovative digital technologies in the field of tax administration.

Advanced technologies continue to develop and contribute to the modernization of taxation. The purpose of this course is to study the potential of digital technologies for the organization of tax administration and its revolution. The incorporation of advanced technologies into these processes facilitates tax administration in real time.

Reviewing how latest technologies can be applied in this domain allow participants to identify a variety of aspects that influence the proficiency of tax administration practices. In this course, the tasks of analyzing the effectiveness of the use of modern digital technologies in tax administration and identifying the key factors that influence its effectiveness were solved.

All governments fundamentally have the same set of principal goals, which are to collect more tax and to collect it more efficiently. Some benchmarks like the Standard Audit File for Tax (SAF-T) and obligations from the Organization for Economic Co-operation and Development (OECD) are gaining footing in Europe.

Because these policies are usually designed at a national level, they result in many differences when it comes to the understanding and implementation of these policies within organizations. Therefore, it is important to understand how to prepare your organizations to face these transformations, as well as be prepared to conduct audits and/or be audited.

This Xcelerate Training Institute Digital Transformation of Tax Administration training course will empower you with insight into digital transformation initiatives in a tax administration context, allowing participants to learn about the innovative projects and tools that are already being used, including cutting-edge technological solutions such as data analytics models, electronic invoicing, online services, machine learning and

Learning Objectives

Upon completing this Digital Transformation of Tax Administration course successfully, participants will be able to:

- Evaluate the possibility of obtaining tax information electronically

- Think about integration with other data sources internal or external to the tax agency
- Learn how build a 360-degree view of the taxpayer
- Consider integrating with advanced analytics for detection of anomalies to all data collected
- Recognize the importance of case selection and case management
- Using predictive analytics to identify defaulters based upon different data sources
- Enable improvements in the processing time, and transparency

Training Methodology

This is an interactive Digital Transformation of Tax Administration training program and will consist of the following training approaches:

- Lectures
- Seminars & Presentations
- Group Discussions
- Assignments
- Case Studies & Functional Exercises

Similar to all our Xcelerate Training Institute courses, this program also follows the 'Do-Review-Learn-Apply' model.

Benefits For Your Organization

Companies who send in their employees to participate in this Digital Transformation of Tax Administration course can benefit in the following ways:
