Smart Metering Training Course

Introduction

Smart meters are critical for creating a more environmentally friendly and reliable energy network globally. However, this initiative places significant pressure on energy firms and their supply chains. By the end of 2025, approximately 50 million smart meters (gas and electric) will be installed across over 30 million premises in the United Kingdom alone. Smart meter installation agents will play a vital role in this process, responsible for installation, exchange, commissioning, upkeep, and decommissioning of smart metering systems. Even experienced engineers may need additional training for smart meter installations, making it essential for industries to address skill gaps and expand the number of competent smart meter installers.
