Data Governance and Data Management Training Course

Introduction

Every AI project, dashboard and regulatory report depends on data that is accurate, consistent and properly protected. Without clear ownership, standards and controls, organisations struggle with conflicting figures, poor data quality and compliance risks.

This course explains how to establish a practical data governance programme based on recognised frameworks such as DAMA-DMBOK. Participants learn to define roles, policies, data quality processes and metadata management, and to align them with data protection laws and national data management standards in the Gulf.

Learning Objectives

By the end of this course, participants will be able to:

- Explain the main data management disciplines and frameworks
- Design a data governance operating model with clear roles
- Develop data policies, standards and procedures
- Measure and improve data quality
- Manage metadata, master data and data catalogues
- Align data governance with privacy and regulatory requirements

Training Methodology

This course combines short expert presentations with practical exercises, case studies from the Gulf and international organisations, group discussions and work with real templates and tools. Participants are encouraged to bring examples from their own work so that the learning can be applied immediately.

Participants assess the data maturity of a case organisation and build a governance roadmap using practical templates.

Benefits for Your Organisation

- Trusted data for reports, analytics and AI
- Clear accountability for data
- Compliance with data protection and national data standards
- Fewer errors and less rework
- Higher value from data assets

Benefits for You

- Comprehensive data management knowledge
- Practical governance templates and tools
- Ability to lead data governance initiatives
- Understanding of data regulation in the region
- A strong profile for data management roles

Who Should Attend

This course is designed for:

- Data managers and data stewards
- IT and business intelligence leaders
- Chief data officers and their teams
- Compliance and risk professionals
- Business owners of key data

Course Outline

Day 1: Data Management Foundations

- Data as a strategic asset
- Overview of DAMA-DMBOK knowledge areas
- National data management standards in the Gulf
- Data maturity assessment
- Common data problems and their causes

Day 2: Governance Operating Model

- Data governance structures and councils
- Data owners, stewards and custodians
- Writing data policies and standards
- Decision rights and escalation
- Building the business case

Day 3: Data Quality

- Data quality dimensions
- Profiling and measuring data quality
- Root cause analysis and remediation
- Data quality rules and monitoring
- Data quality dashboards

Day 4: Metadata, Master Data and Architecture

- Business glossaries and data catalogues
- Master and reference data management
- Data lineage
- Data architecture and integration basics
- Preparing data for analytics and AI

Day 5: Privacy, Security and Roadmap

- Data classification and protection
- Privacy by design
- Data sharing agreements
- Measuring governance performance

- Data governance roadmap for your organisation
