Fraud Detection, Investigation Audit and Corrective Action in Government Accounting

Introduction

Government accounting is a critical function as it deals with huge sums of money of taxpayers and other forms of collection. Given the expanse of the sector and the number of individuals handling financial data, the chances of fraudulent practices are very high. As such, officials need to be well informed of the possibilities of fraud and well prepared with the best methods to detect and prevent them. Fraud is committed by those under pressure, opportunity or rationalization to commit the fraud.

Fraud in the government has an exponential impact on not just citizens and governance, but also on the overall economic development of the country. Some common signs of fraud include living beyond one's own means, paying unusually close attention to certain clients/vendors, refusing to share responsibilities and duties with anyone, etc.

Many public sector organizations rely solely on external auditors to detect fraud, although typically an audit has been designed to check fair presentation of financial statements rather than detecting fraud. The government has had its share of employee embezzlement, theft, false expenses and misappropriation of money.

Among all types of fraud, fraudulent financial reporting is on the rise. Fraudulent financial reporting is the intentional misrepresentation of financial statements with the aim of earning profits and misleading recipients about operational performance and financial liability.

In the government, fraudulent financial reporting is usually committed to receiving funding for projects, financing terms and interest rates. There are various methods and signs to indicate fraud within the government. Government accounting fraud highly influences investor decisions to issue bonds and has a grave impact on taxpayers, citizens and civic employees.

Considering that all taxpayer money is at stake, the government needs to implement stringent systems and processes to help keep a check on financial information, transactions and operations to prevent fraud. Financial information handling for government accounting purposes is not completely digital and is subject to manual intervention.

This itself explains why detection and prevention against fraud, especially financial/accounting fraud, needs to be treated so seriously. Thus, awareness regarding government accounting and related possibilities of fraudulent practices is definitely critical.

This Xcelerate training course will empower you with a detailed understanding of government accounting, fraud in government accounting and detection and prevention of government accounting fraud. It will provide you with the necessary awareness to detect possibilities of fraudulent practices and devise preventive measures to minimize the impact such instances have on citizens and the economic growth of the nation.

The knowledge gained through this course will specialize you in the detection of fraud through various means and methods and enable you to play an important role in preventing fraud and taking necessary action to discourage recurrence. Further, by undertaking this course, you will be capable of suggesting and implementing new ways to manage fraud and prevent future instances that could drastically impact growth.

Learning Objectives

The main objective of this course is to empower government professionals with—

- a detailed understanding and knowledge of fraud and fraudulent practices in government accounting
- the required awareness to keep a keen eye on operations and minute details of other business transactions to be able to detect possible instances of fraud occurrence and devise appropriate next steps to prevent the occurrence
- the required capabilities to work with advanced techniques and methods to detect and prevent fraud
- the knowledge and experience to be part of decision making and policy forming for handling fraud in government accounting
- the confidence to handle instances of fraud and implement disciplinary action and next steps in the event of such instances
- awareness and values to build a value-driven, ethical work culture discouraging illegal practices and unethical work conduct
- additional skill, confidence, experience and exposure to undertake higher roles and responsibilities, in turn helping them progress in their roles or across roles within the organization

Training Methodology

Xcelerate Training Institute offers training courses across a wide range of topics in the most customizable form. The Fraud Detection, Investigation Audit and Corrective Action in Government Accounting course is customized as per the professional backgrounds and experience of the training audience. Besides lectures and presentations on the topic of discussion, the course includes group activities and role-plays among trainees to ensure participation and learning.

Further, the trainer discusses famous and recent case studies to foster relativity with some known reference. Trainees are also encouraged to share any relevant experiences that they have had in their roles or organizations, and these situations are discussed in detail.

This course, like all Xcelerate Training Institute’s courses, follows the Do–Review–Learn–Apply Model.

Benefits for Your Organisation

With their employees undertaking this course, public sector organizations will benefit in the following ways:

- Trained and experienced employees to manage fraudulent instances and devise appropriate next steps
- Reduced instances and chances of fraud because of employees and management being more prepared and aware
- Prevention of fraud by predicting possible instances in advance and taking necessary steps in time
