ISO/IEC 27001 Information Security Management Training Course

Introduction

Clients, regulators and partners increasingly ask for proof that information is protected. ISO/IEC 27001 is the internationally recognised standard for an information security management system (ISMS), and certification is often required in tenders and supplier assessments across the Gulf.

This course explains the 2022 version of the standard and how to implement it step by step: scoping, risk assessment, Annex A controls, documentation, internal audit and certification. It also shows how ISO 27001 supports national cybersecurity requirements and data protection laws.

Learning Objectives

By the end of this course, participants will be able to:

- Explain the structure and requirements of ISO/IEC 27001:2022
- Define the scope and context of an ISMS
- Perform information security risk assessment and treatment
- Select and implement Annex A controls
- Prepare the documentation and statement of applicability
- Plan internal audits and prepare for certification

Training Methodology

This course combines short expert presentations with practical exercises, case studies from the Gulf and international organisations, group discussions and work with real templates and tools. Participants are encouraged to bring examples from their own work so that the learning can be applied immediately.

Participants build ISMS documents for a case organisation, including a risk register and statement of applicability.

Benefits for Your Organisation

- Stronger protection of information assets
- Readiness for ISO 27001 certification
- Easier compliance with cybersecurity regulations
- Increased trust from clients and partners
- Fewer and less costly security incidents

Benefits for You

- Detailed knowledge of ISO/IEC 27001:2022
- Practical implementation templates
- Ability to lead or support certification projects
- Internal audit skills

- A recognised specialist competence

Who Should Attend

This course is designed for:

- Information security managers and officers
- IT managers and system administrators
- Risk and compliance professionals
- Internal auditors
- Quality and management system coordinators

Course Outline

Day 1: Information Security and the Standard

- Information security principles and threats
- The ISO 27000 family of standards
- Structure of ISO/IEC 27001:2022
- Context, interested parties and scope
- Leadership and information security policy

Day 2: Risk Assessment and Treatment

- Asset identification
- Risk assessment methods
- Risk treatment options and plans
- Risk acceptance and ownership
- Building the risk register

Day 3: Annex A Controls

- Organisational controls
- People controls
- Physical controls
- Technological controls
- Statement of applicability

Day 4: Operating the ISMS

- Documentation and records
- Awareness and competence
- Incident management and business continuity
- Supplier and cloud security
- Monitoring and security metrics

Day 5: Audit and Certification

- Internal audit planning and execution
- Nonconformities and corrective action

- Management review
- The certification process
- Implementation roadmap
