Lean Six Sigma Green Belt Training Course

Introduction

Lean Six Sigma combines Lean's focus on removing waste with Six Sigma's data-driven approach to reducing variation. Organisations in manufacturing, services, healthcare and government use it to deliver faster, cheaper and more reliable processes.

This Green Belt course teaches participants to lead improvement projects using the DMAIC method: define, measure, analyse, improve and control. Participants learn core Lean and statistical tools and apply them to a real or case project.

Learning Objectives

By the end of this course, participants will be able to:

- Explain Lean and Six Sigma principles and the DMAIC method
- Define improvement projects with clear scope and goals
- Measure process performance and collect reliable data
- Analyse root causes using statistical and Lean tools
- Develop, test and implement improvements
- Sustain results with control plans

Training Methodology

This course combines short expert presentations with practical exercises, case studies from the Gulf and international organisations, group discussions and work with real templates and tools. Participants are encouraged to bring examples from their own work so that the learning can be applied immediately.

Participants apply each DMAIC phase to an improvement project, using spreadsheet-based statistical tools.

Benefits for Your Organisation

- Lower costs and fewer defects
- Faster, more reliable processes
- Data-driven problem solving
- Trained improvement project leaders
- Measurable financial results

Benefits for You

- Structured problem-solving skills
- Practical Lean and statistical tools
- Ability to lead improvement projects
- A widely recognised improvement competence
- Preparation for Green Belt certification exams

Who Should Attend

This course is designed for:

- Process owners and operations managers
- Quality and excellence professionals
- Engineers and analysts
- Project managers and team leaders
- Staff in improvement or transformation roles

Course Outline

Day 1: Define

- Lean and Six Sigma principles
- The DMAIC roadmap
- Project selection and charters
- Voice of the customer and critical-to-quality requirements
- SIPOC and process mapping

Day 2: Measure

- Data types and collection plans
- Measurement system analysis
- Process capability
- Descriptive statistics and charts
- Baseline performance

Day 3: Analyse

- Root cause analysis tools
- Value stream mapping and waste
- Hypothesis testing basics
- Correlation and regression
- Verifying root causes

Day 4: Improve

- Generating and selecting solutions
- Lean tools: 5S, standard work, flow and pull
- Error-proofing
- Piloting improvements
- Implementation planning

Day 5: Control

- Control plans
- Statistical process control charts
- Standardisation and documentation
- Project closure and benefits

- Presenting results
